WOOD END ACADEMY

CLIENT

Wood End Academy teaches children from 7 to 11 years old. Their teaching is stimulating and creative and encourages their children to continue their education outside of school and become lifelong learners. Teachers work with the children to ignite an interest in the world around them, and for that interest to lead fulfilling and imaginative lives.

THE REQUIREMENT

Wood End Academy wanted to replace existing traditional projector based technology. Teachers had used SMART whiteboards and wanted to be able to use their existing resources if possible when moving to the new technology.

THE SOLUTION

Vivid, bright front of class IBT interactive displays replaced the projector screen eliminating the need to darken the classroom to view content. Students engaged with the touchscreen technology and found it easy to use.

The IBT software (Hive) with pens, tools and mini apps allows teachers to open SMART .notebook files with all the layering intact so teachers could use their existing smart resources with all the animations on new state-of-the-art technology. The ability to open SMART files without installing the native software also saved the school money in software subscription fees.

As part of the solution, training was provided so that teachers could make full use of the new interactive and collaborative solution.

We moved from our old interactive whiteboards to IBT interactive displays as staff were finding the quality of the projectors not to a good standard and children were finding it difficult to read the boards. Since we have used IBT technology we have found them to be far clearer and easier to use. The children and staff love them!

The software bundled with the interactive display is extremely intuitive and we found our teachers can start using it straight-away, which enhances the learning in the classroom. We have lots of files from other software which we are able to open seamlessly on the IBT interactive display.

We rolled out IBT interactive displays across the school when the projector based interactive boards failed and will recommend IBT to other schools who are looking to upgrade their technology.
