NATIONAL HEALTH SERVICE

CLIENT

The Mid Yorkshire Hospitals NHS Trust provides acute and community health services to around half a million a year. They provide two specialist regional services, in burns and spinal injuries, which are renowned across the North of England and beyond and also have three specialist centres to provide patients with the very best levels of expertise, experience and knowledge, and the very latest specialist equipment.

Inpatient Orthopaedic Trauma Surgery for emergency operations to a patient's bones or joints is one of these specialist centres.

THE REQUIREMENT

The Trauma and Orthopaedic department wanted a way to enable specialist surgeons to interact remotely with students. They also wanted to be able share files with students and help medical students to learn via remote learning.

They needed a collaboration environment that would allow full interaction between all the students (some of who may be in different locations), with control of the session by the surgeon.

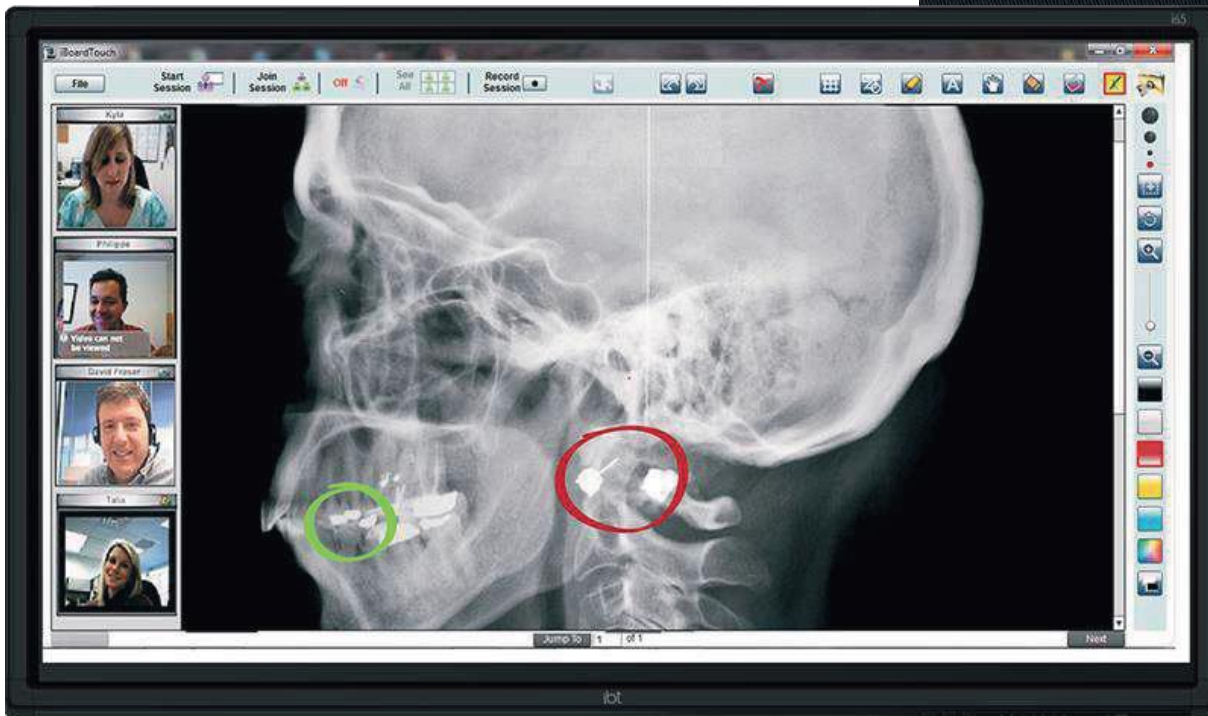

THE SOLUTION

IBT worked with Dr Nals Venkat, Consultant Trauma and Orthopaedic Surgeon to deliver a detailed solution that would fulfil the requirement; as a result the IBT Video Conferencing and Collaboration software was re-developed and modified by the IBT software team to become the solution to the challenges posed by the specialist surgeons.

Surgeons were trained on real time collaboration technologies to help them to understand how the solution would be delivered.

The IBT Video Conferencing and Collaboration software allows the teacher and students to listen and watch live content and talk and collaborate if given permission by the teacher. It is used to deliver on-line interactive teaching in real-time.

The solution enables lecturers (in this case the Consultant Trauma and Orthopaedic Surgeon) to show presentations, x-rays, and records. Staff can work on the interactive whiteboard or use the annotation tools outside of the interactive whiteboard on any of their files or web content.

Along with the VCC software, IBT 55" interactive displays were supplied as part of the solution.
